

Privilege Escalation Log

Task ID	Technique	Target IP	Status	Outcome
010	SUID Exploit	192.168.1.150	Success	Root Shell

50-Word Summary

Privilege escalation was achieved by exploiting a misconfigured SUID binary identified using LinPEAS, resulting in root access. Persistence was established by creating a malicious cron job that initiates a reverse shell on reboot or scheduled execution, allowing continued administrative access to the compromised system.

Checklist

Enumeration

- ☐ Upload LinPEAS to target
- ☐ Execute LinPEAS
- ☐ Identify SUID binaries
- ☐ Note kernel version and cron jobs

Privilege Escalation

- ☐ Exploit SUID misconfiguration
- ☐ Validate root access
- ☐ Capture evidence screenshots

Persistence

- ☐ Create cron-based backdoor
- ☐ Confirm reverse shell callback
- ☐ Document persistence method
